

Certalytic: The Interview Integrity Layer

Stop proxy candidates and AI-assisted interviews from becoming expensive mis-hires.

The Problem: The €100,000 Mistake

Remote hiring has introduced a severe vulnerability: real-time AI assistance and proxy interviewing. Traditional technical assessments and standard behavioral loops are no longer enough to verify that a candidate's interview performance represents their real-time, independent ability. Hiring the wrong candidate costs months of runway, engineering delays, and cultural damage.

The Solution: Certalytic

Certalytic is a **decision-support integrity layer** that sits on top of your existing ATS workflows. We do not replace your process; we secure the finish line.

Instead of relying on invasive live-proctoring, Certalytic analyzes the data you already have to surface inconsistencies between what the candidate claims and how they actually performed — plus supplementary behaviour and personality insights for your hiring committee.

How It Works

We intentionally designed Certalytic for the very bottom of your hiring funnel. Once your candidate pool is narrowed down to the final 5–10 individuals, your team builds an integrity dossier in three steps:

1. **Create a role** — Save the job title, description, and optional scan assets (Scale tier).
2. **Screen candidates** — Upload the CV, paste up to three interview transcripts (merged automatically), and add LinkedIn/GitHub URLs.
3. **Export the report** — Review the integrity dossier in-app or download a watermarked PDF for your hiring committee (per candidate or batch export for an entire role).

The Integrity Engine

Our engine synthesizes these inputs to detect stylistic shifts, timeline inconsistencies, and communication coherence. The evaluation is deterministic and transparent:

Integrity Score = (S_{cv} × 0.25) + (S_{int} × 0.50) + (S_{cross} × 0.15) + (S_{id} × 0.10)

- **30% CV Authenticity:** Validating timeline consistency and role fit.
- **40% Interview Signal:** Tracking signal density and stylistic shifts across technical and behavioral interview segments.
- **20% Cross-Source:** Ensuring alignment between the CV and public profiles (GitHub/LinkedIn).
- **10% Identity:** Mapping communication coherence across all documents.

Supplementary insights (not in the score): Every screening also includes **candidate behaviour analysis** (communication style, collaboration indicators) and **candidate personality analysis** (work style, motivation signals, culture-fit indicators) — surfaced in dedicated report tabs and PDF exports, explicitly excluded from the Integrity Score.

Every report includes specific, evidence-based follow-up prompts for your hiring managers to use in the final conversational round.

Pricing (EUR)

Plan	Price/mo	Screenings/mo
Free	€0	3
Starter	€159	20
Growth	€349	50
Scale	€799	125

Screening packs (paid plans): Quick Refill (€99 / 10 screenings), Pipeline Surge (€299 / 35), High-Volume Boost (€750 / 100).

Why Enterprise & EU Leaders Choose Certalytic

- **100% EU Data Sovereignty:** We route all document and audio intelligence exclusively through Mistral La Plateforme in Paris and Hetzner EU datacenters. There are **no US AI providers** in the candidate data path, bypassing GDPR headaches.
- **Zero Model Training:** Candidate data is explicitly ring-fenced and never used to train or fine-tune foundation models.
- **Human-in-the-Loop:** We provide a probability heuristic and follow-up questions, not an automated "pass/fail" verdict, ensuring compliance with automated decision-making

regulations.

- **Scalable Context:** On our Scale tier, you can upload specific grading rubrics and take-home instructions so the AI understands exactly what a "good" answer looks like for your specific technical roles.
- **Exportable dossiers:** Watermarked PDF exports for individual candidates or entire roles — ready for your hiring committee.

Make your next hire with absolute confidence. Let's run a test screening on a past candidate transcript today.
